

**Ergo
Mover**

Pat. Pending

You wouldn't use a pulley and rope instead of a crane - why would you then push your material around manually?

In today's world technology has thankfully made material handling both more efficient and has improved the working environment for the employees that daily must handle heavy materials. ErgoMover 3300 takes over the heavy pulling, pushing and lifting when it comes to moving materials around a jobsite, in industrial facilities or at special events.

ErgoMover 3300 Standard

The ErgoMover 3300 Standard comes with a powerful all-terrain drivetrain with electric motors and hydraulic lifting/lowering function. The hydraulic system makes it possible to off-load material onto sawhorses or other stacking devices.

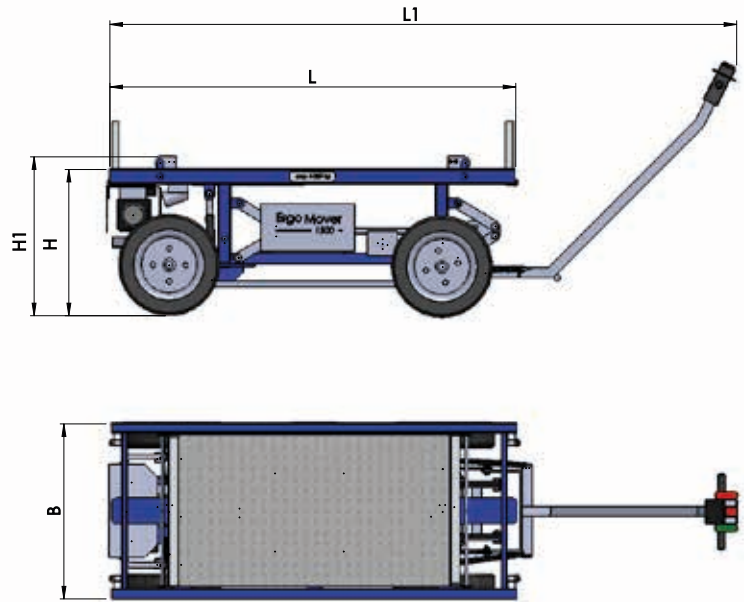

The ErgoMover trolley has a capacity of 3300 lbs. payload and with a width of only 2 ft. 3in. it will go through a standard door. The hydraulic lifting system allows for clearance of 6 inches to off-load any material in a safe, quick and efficient manner.

In addition to the Standard model, the ErgoMover comes in different variations, including the ErgoMover 3300 Rotator featuring a 360 degree continuous rotating table, the ErgoMover 3300 Manipulator featuring a hydraulic tilting function that allows material to be tilted from horizontal to vertical position. Finally, the ErgoMover 3300 Basic provides a safe transport solution for those that do not need to lift or lower material, but simply need to transport it.

ErgoMover 3300 -Standard Specifications

Lifting capacity	3306 lb
Max. driving speed	3m/h
Speed control	Stepless
Wheels	(Option) Foam filled tires
Voltage	24 volt
Charger	Integrated 230 volt (110 volt)
Liftingfunction	Electro-hydraulic
External length (without handle) (L)	5ft 4in
Internal length (with handle) (L1)	10ft - 10ft 4in
External width (B)	2ft 3in
Height (H)	1ft 10in
Height (H1)	1ft 10in- 1ft 11in
Weight	550 lb

ErgoMover 3300 - available in four models

ErgoMover3300-Basic

A powerful solution to transport materials without the need of the hydraulic lifting system. Equipped with all-terrain electric motor and 4-wheel steering, the ErgoMover provides a reliable solution to moving material around job sites.

ErgoMover 3300-Standard

The most popular version that in addition to the Basic model features also boasts a strong hydraulic lifting system making it possible to off-load for example, heavy sheetrock board and building materials on sawhorses.

ErgoMover 3300-Rotator

For job applications that require material to be turned during transport or provide close up off-loading next to a wall, the Rotator model is simple, but intelligent with a 360 degree continuous rotating table that allows for ultimate flexibility.

ErgoMover 3300-Manipulator

The Manipulator version features a hydraulic system that will allow tilting material from horizontal to vertical position and vice versa. With this system you can take material straight from a delivery truck to the work area on the job site and raise up for example sheet rock panels; Safely, efficiently without damage to the material or injury to your employees.
